Anticipation Guide: Infectious Diseases – Exploring misconception

Statement	Agree/Disagree	Reflection
The flu vaccine can give you the flu.		
Deemed the “miracle drug” in the 1940s, antibiotics are the cure-all of virtually any infectious disease.		
Antibiotics can be taken as preventative measures against some infections.		
Vaccine-preventable diseases have been virtually eliminated from North America, so there is no need to be vaccinated.		
All sexually transmitted diseases are curable.
